Standards of Public Land Health Evaluation of 63017 BUCK DRAW Allotment [03/03/2010]

The Roswell Field Office conducted rangeland health assessments at 4 study sites within 63017 BUCK DRAW. The assessments looked at the Soil/Site Stability, Hydrologic Function and Biotic Integrity indicators within the vicinity of each study site. Existing monitoring data was incorporated into and in support of the field assessment. The summary of each assessment is attached and shown in the following table.

Study Area or Assessment Area	UPLAND			BIOTIC			RIPARIAN		
	Meets	Monitor an Indicator	Does Not Meet	Meets	Monitor an Indicator	Does Not Meet	Meets	Monitor an Indicator	Does Not Meet
63017-#1-E031	X			X			N/A		
63017-#5-E035	X			X			N/A		
63017-#6-E036	X			X			N/A		
63017-#7-E037	X			X			N/A		

Twenty-two (22) indicators for Rangeland Health were evaluated for public land on the Buck Draw allotment, 63017. Ten of these assessed soil site stability, 11 hydrologic functions and 13 assessed biotic integrity. These qualitative assessments in conjunction with quantitative information gathered from previous data collected at the trend study plot location within the allotment was utilized to make rangeland health determinations. Quantitative evaluations are performed by the Roswell Field Office interdisciplinary teams, which include some or all of the following: ground and vegetative cover and composition, production, frequency and ecological condition. The collections which were initiated in the late 1970's/early 1980's are scheduled and conducted approximately every 5 years. This allotment is in the "M" (Maintain) category.

This allotment contains 6,717 acres of public land. The studies are located on three Shallow CP-3 ecological sites and a Loamy CP-3 ecological site. All of the indicators were rated as "None to Slight" or "Slight to Moderate" degree of departure from the ecological site description. There are no riparian areas on the public land in this allotment.

Recommendations: With the all of the indicators falling in the "None to Slight" or "Slight to Moderate" category, this allotment is rated as "Meeting" the standard for Rangeland Health. Continue the rangeland monitoring studies to insure proper stocking rates are maintained and that the perennial grass cover and good plant composition remains.

Determination of Public Land (Rangeland) Health for 63017 BUCK DRAW

The Record of Decision (ROD) for the New Mexico Standards for Public Land Health and Guidelines for Livestock Grazing Management (dated January 2001) adopted three Standards for Public Land Health. These are (1) Upland Sites Standard, (2) Biotic Communities, including Native, Threatened, Endangered and Special Status Species Standard and (3) Riparian Sites Standard.

The ROD also established a process for the BLM Field Offices for implementation. Through a public participation process, the Roswell Field Office developed and adopted indicators to use in conjunction with existing monitoring data to assess these standards.

Field assessment worksheets and other available data that evaluated the local indicators completed for this allotment. Based on these assessments, it is my determination that public land within the Buck Draw allotment, 63017 meets the (1) Upland Sites Standard and (2) Biotic Communities, including Native, Threatened, Endangered and Special Status Species Standard. There are no riparian areas on this allotment therefore this standard was not addressed.

/s/ J. Howard Parman
Acting Assistant Field Manager
